ABOUT ME

As a Frontend Developer and Computer Science student, I love developing Frontend experiences. I've used HTML, CSS, JavaScript, React, and Git in both school and work. I currently work as a Teacher and Trainer at Brain Scoop IT Academy where I teach students how to build real projects in web development. In addition, I recently completed a one-month internship with Code Alpha where I built several frontend projects including a calculator, portfolio website, music player, and image gallery. I am looking forward to further developing my skills in a professional development environment and at the same time contributing to projects that make an impact.

EXPERIENCE

Brain scoop IT Acadmey

Onsite-TandoAllahyar.pk

Frontend Teacher & Trainer

2024 - Present

At present, I am working as a Frontend Development Instructor and Trainer where I teach students hands-on skills in HTML, CSS, Bootstrap, JavaScript, React.js, Tailwind CSS, Git, GitHub, and Java. I put emphasis on hands-on learning and real-world projects so that learners build a strong base with web development, version control, and programming logic. My hopes are that students have the factors of knowledge and confidence to go out and be successful in the tech industry.

CodeAlpha

Remote-India

Frontend Virtual Internship

May 2025 (01 - 30)

In the month-long timeframe of my internship at Code Alpha, I completed numerous frontend development tasks related to HTML, CSS, and JavaScript. For my internship project work, I completed a responsive Calculator, a personal Portfolio Website, an interactive Music Player, and a dynamic Image Gallery, all of which helped me build professional web development fundamentals, primarily in terms of UI/UX and hands-on experience in developing easy-to-use web interfaces.
